

Blown Apart

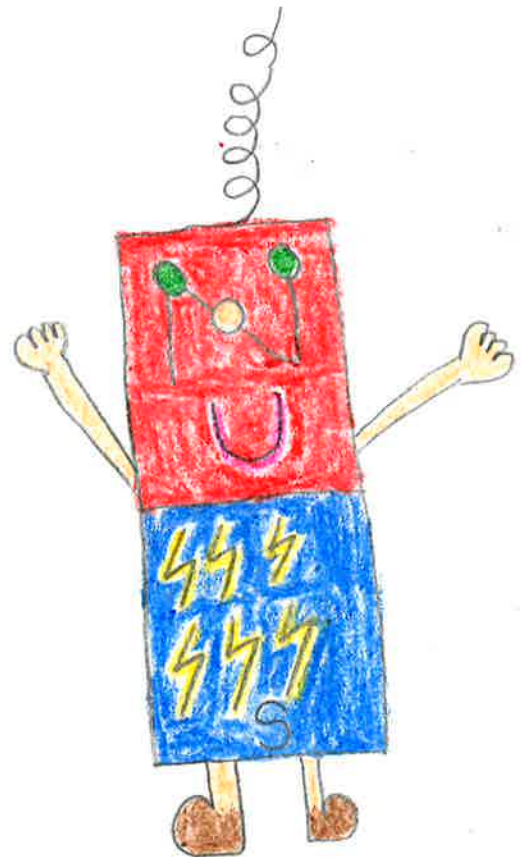

Written by and

Illustrated by Greyson Lee

Here in a city
called Matterful,
there was a tiny
lab, with a scientist
named Circuitron,
and freinds:

Mr. Tight Adams,

Mrs. Flowing
Shape,

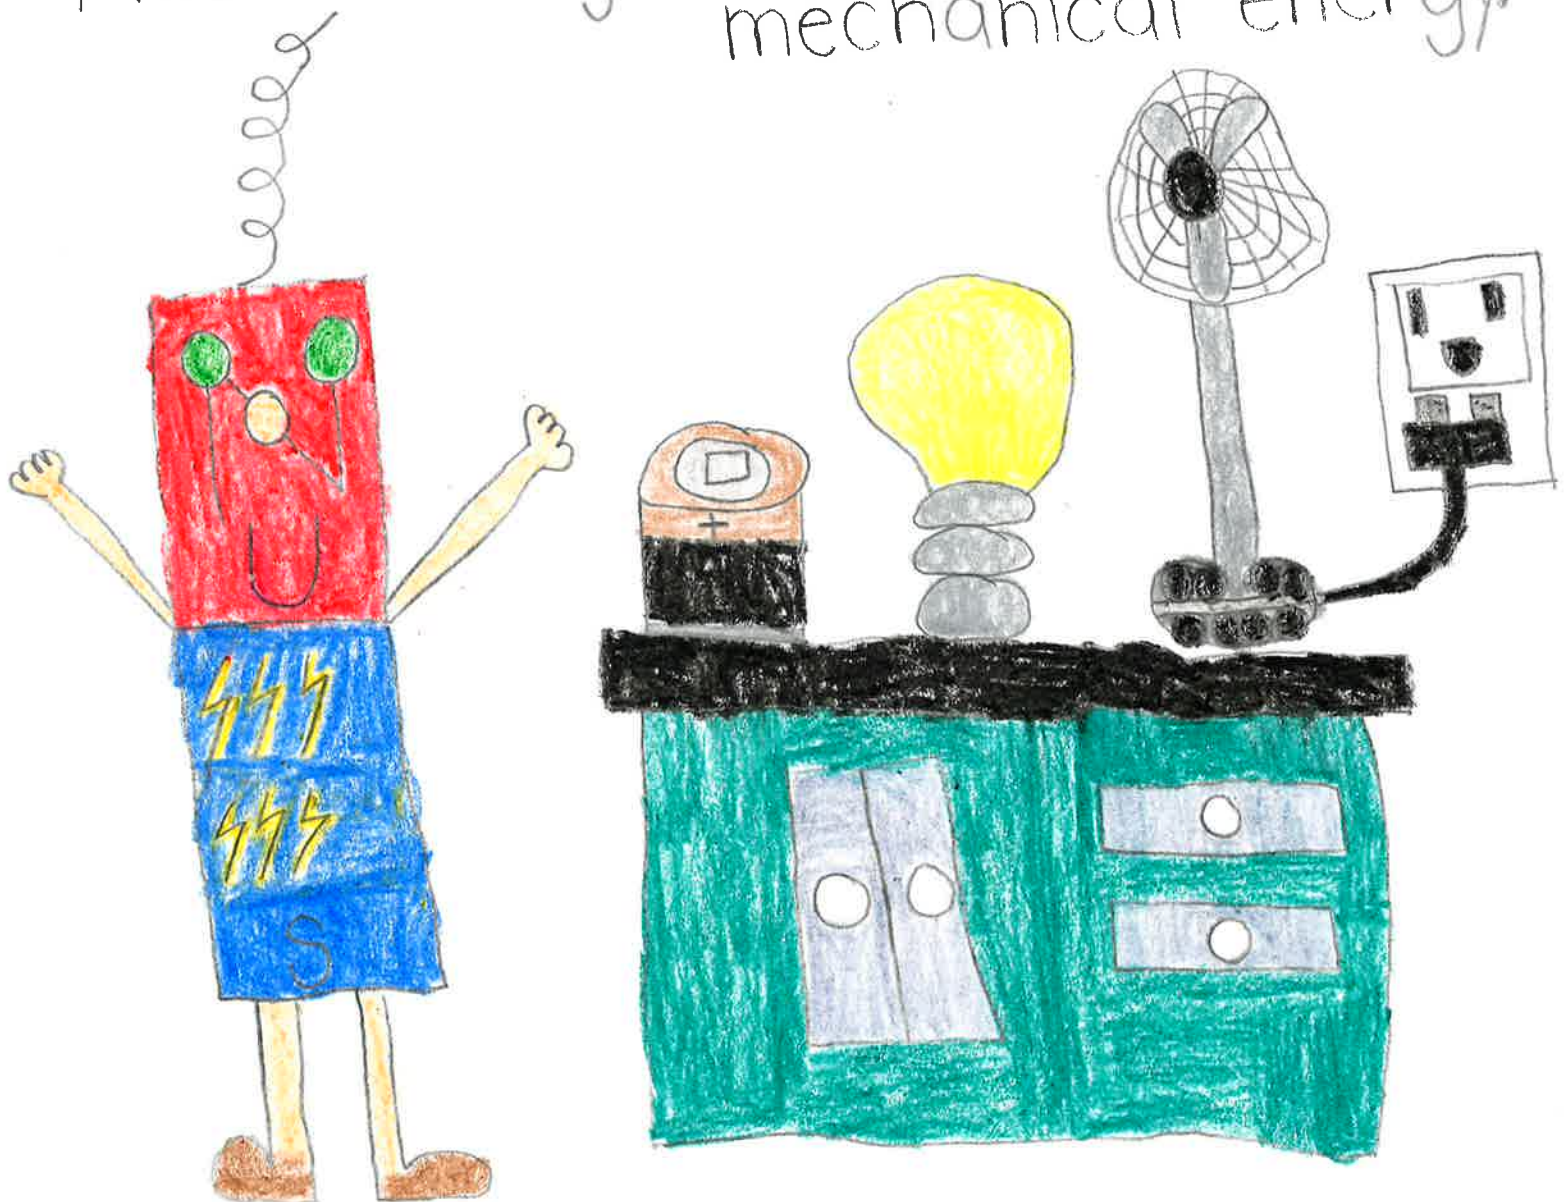

and Gashimer.

Gashimer always
wears sparkely
clothes, even at
nighttime!

One great day, everybody was learning electricity at the tiny lab. Scientist Circuitron started teaching, "Electricity can make light, heat, and mechanical energy. This fan right here makes mechanical energy."

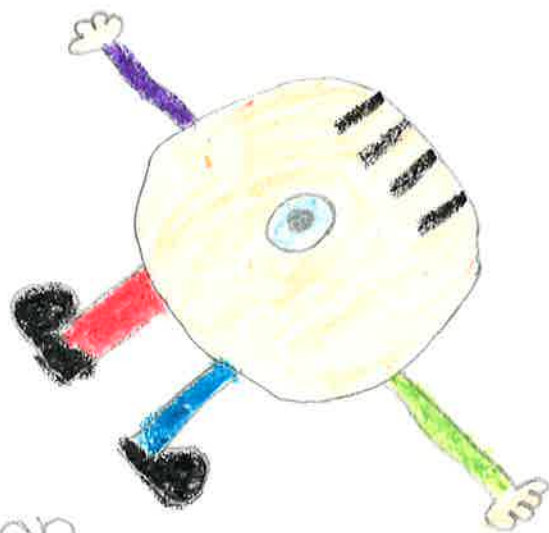

Gashimer walked over near the fan, woosh! he got blown apart. Mrs. Flowing Shape shouted, "Uh oh, that's not good, now what are we going to do!"

Gashimer yelled,

"Excuse me

Scientist Circuitron,

help me!"

Scientist Circuitron said,

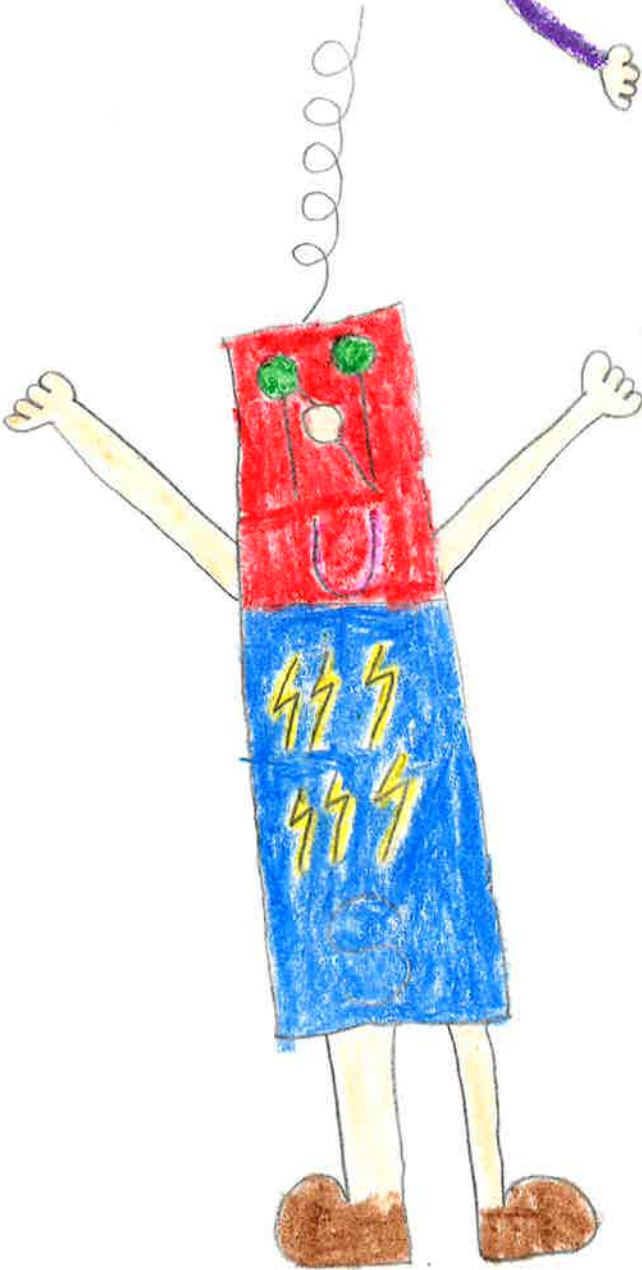

"Here we go, I'm catching

Gashimer in a net. Nope,

it does not work!"

Gashimer fell right through.

Excuse me,

help me!

"Let me try to catch Gashimer in a balloon."

Scientist
Circuitron
got a balloon,

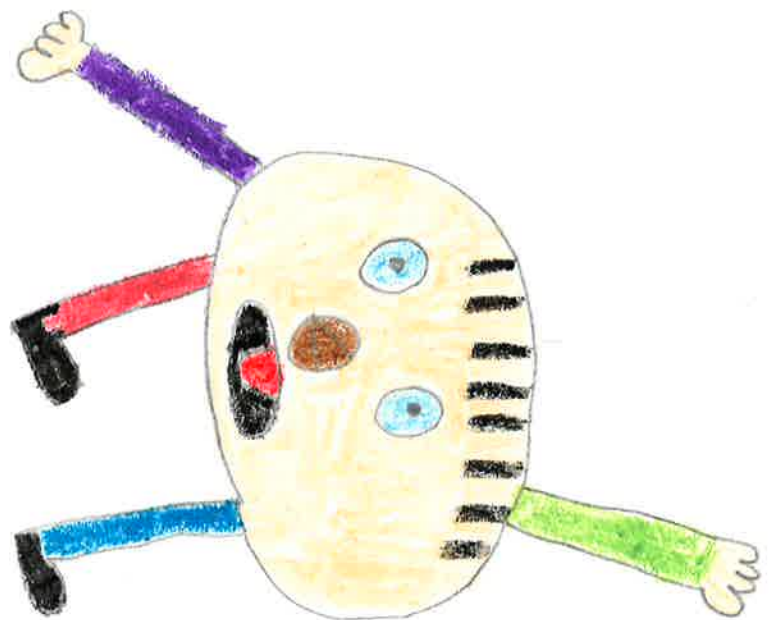

opened the air hole,
cought Gashimer, and
closed the air hole
with velcrow.

He unvelcrowed
the balloon,
baam!
Gashimer
fell on the floor!
Ta da, it realy
works!

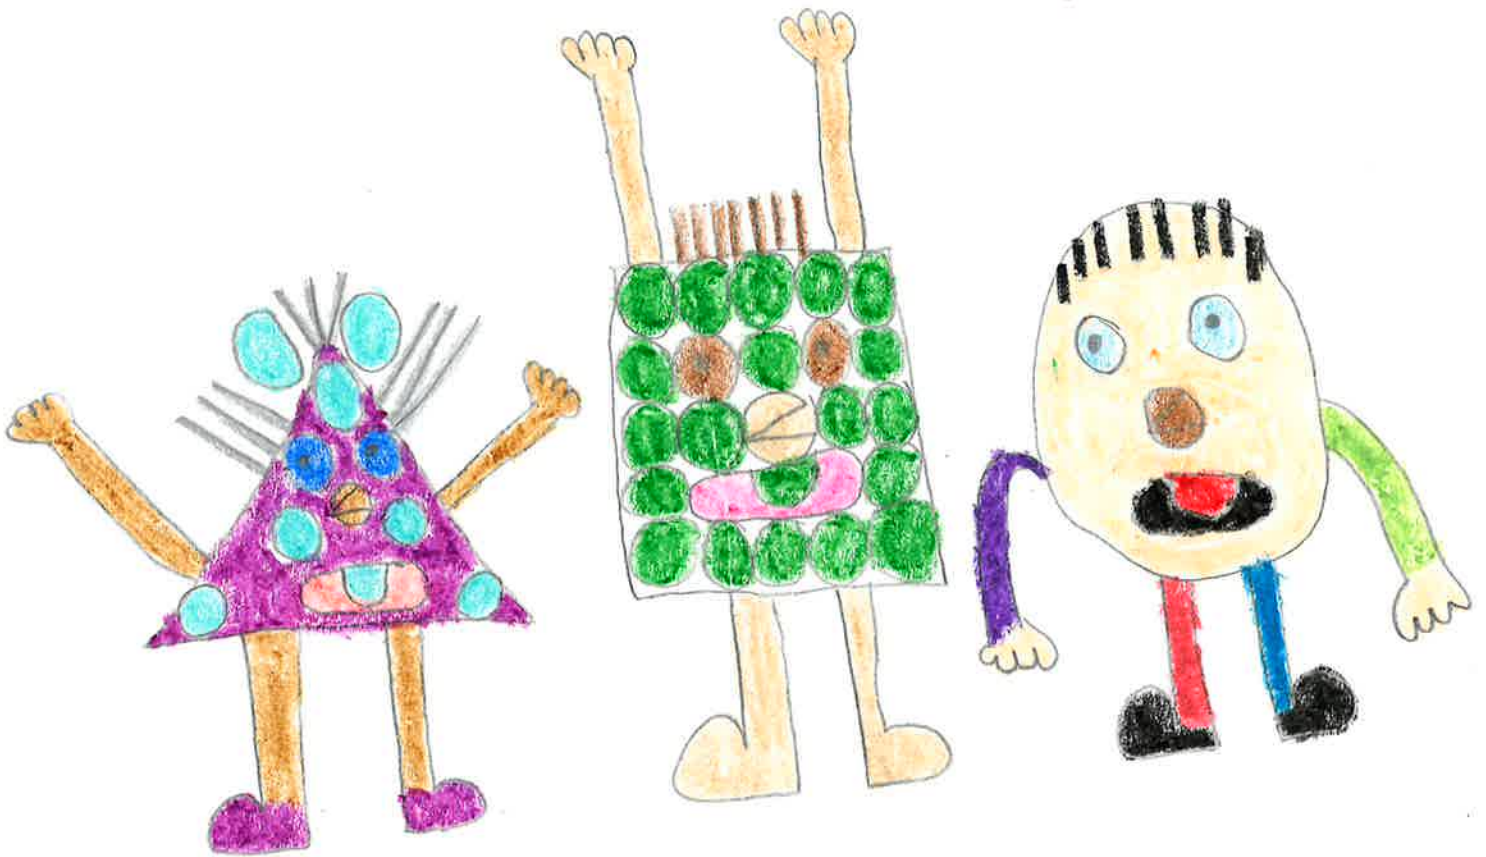

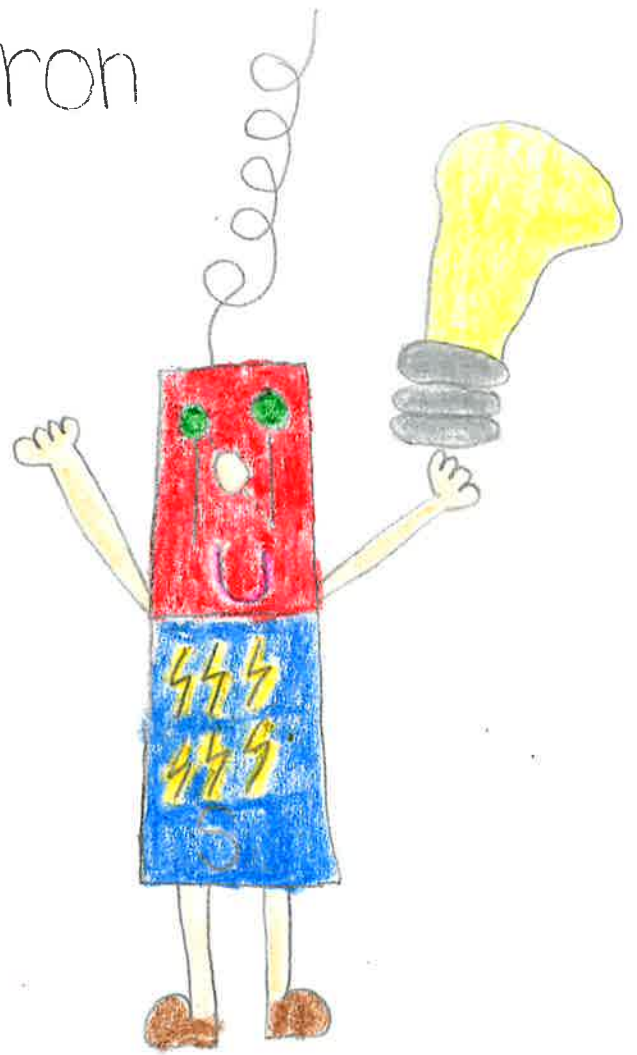

Yay,
Gashimer's
back!

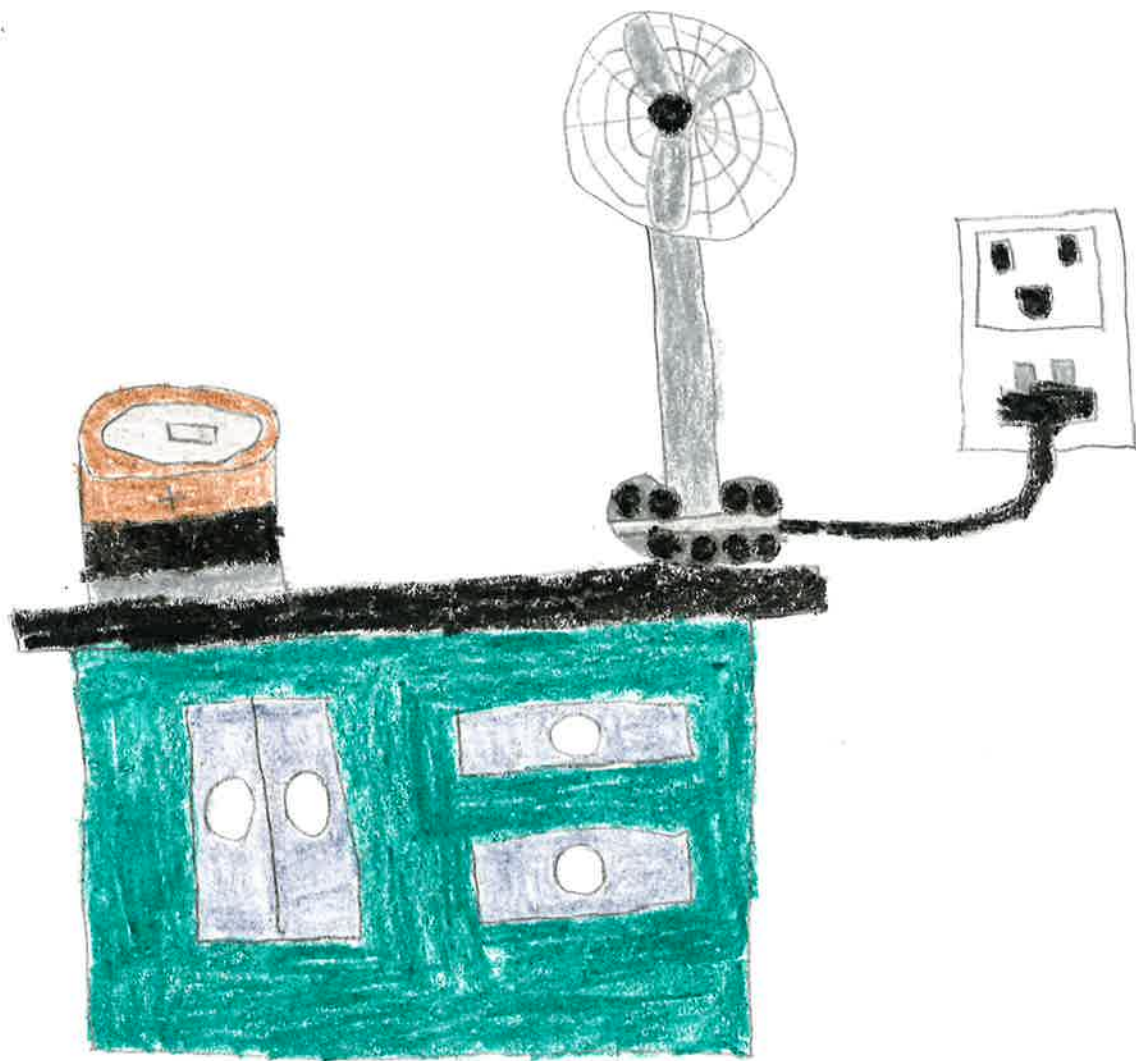

Scientist Circuitron

went back to

teaching
electricity.

Do you know what kinds of energy a light bulb uses? Mr. Tight Adams answered, "light and heat." "Correct. Come back tomorrow, I'll teach you more."
